

## Real-Time Application Security Intelligence

FairWarning provides healthcare organizations with real-time event monitoring and continuous application security intelligence to detect anomalous user behaviors in EHRs and defend against today's next generation of threats to protected health information (PHI).

### Real-Time Analysis Engine

Real-time detection and proactive alerting of inappropriate access to PHI across all major EHRs and healthcare applications

### Intelligent & Actionable Insights

Rapidly identify unusual user access patterns across multiple applications with one-click visualization and proven behavioral analytics

### Next Generation Analytics & Filtering

For the first time, customers can automatically correlate user identity information into advanced analytics and filtering of user behavior in healthcare applications

### Cooperative Threat Detection & Response

Seamless integration with SIEMs and other security intelligence tools provides end-to-end protection and a quicker, more efficient incident response

Compatible with **350+** Applications

## Solutions for Security & Governance Professionals
